## High Viscosity Static Mixers, Series 246

---

For high viscosity blending applications we recommend our helical design mixer. These high viscosity mixers are generally used in applications that have a Reynolds number below 500. This can be a result of either a low flow rate, a high viscosity, or a combination of both. This element design is available as an option throughout most of our product line.

### High Viscosity Mixer Applications

- Epoxy Blending
- Fruits into yogurt
- Cookies into ice cream
- Thermal Homogeneity
- Folding and/or Striping
- Slurry suspensions
